

In The Specification:

Please replace the paragraph found on page 10, lines 1-8, with the following paragraph:

Each of the central hubs contains several independent fluid pathways or passages (e.g., through holes 22, 62 and holes 23, 63 of the central hub) each of which are provided substantially parallel a central axis of the hub, that interconnect with like passages on subsequent hubs during assembly. The interlocking nature of the hubs forces the fluid pathways to be consistent throughout the assembly such that all fluid pathways maintain independence from one another. Specifically, a single fluid pathway is formed inside the assembled set of hubs that communicates with all the expressing bags or chamber (through holes 23, 63). Further, each processing chamber or bag has a unique and independent fluid pathway through the assembled set of hubs (through holes 22, 62).
